Integrate Workday using Intelligent Integration and Automation -

Workday Automation eBook

Human resource is one of the most overworked departments of any organization. From job postings to solving workplace disputes, the HR department interacts with almost everyone in the group.

It is the HR department that ensures the smooth functioning of any organization. So it goes without saying that the inefficiency of HR departments also makes the other department inefficient.

Intelligent integration & automation can really help HR departments save time and avoid unnecessary frustration. The core of Intelligent integration & automation is to integrate your HR application to other applications utilized in the organization and the popular HR application in use is Workday.

Let's understand how Workday can be integrated using Intelligent Integration & Automation.

What is Workday?

There are a lot of HCM services application in the market, But Workday is still the best.

Workday is a stand-alone platform that is designed for enterprises to manage human resource features like payroll, time tracking, talent management, data analysis and much more.

Workday allows companies to manage their workforce more effectively.

How Intelligent Integration and Automation can Help?

SAPPER.

Workday can be used efficiently if integrated with different applications. Meaning that your HR system could be integrated with other systems like CRM's, communication tools etc.

With intelligent integration & automation, you can manage customer information, manage reports, and manage employee information.

Sapper's Pre-built Automations for Workday

| Connect Salesforce with Workday	Connect Employee Info from Workday to Oracle EBS	Sync SAP data into Workday
• A new account is created/updated in Salesforce • Sapper's intelligent integration & automation searches for customer information in Workday • If no information is found, Our Intelligent Integration & Automation creates a new customer Id. • If the information is available, Sapper updates it with new information.	• A new employee is added in Workday • Sapper's intelligent integration & Automation will check the same information in Oracle EBS • Create if the information is absent and update if the information is present • Sync the Oracle EBS employee ID to Workday	Create a trigger to sync SAP data to Workday
